Get Rue, Wormwood, and Gall, to strew on your Floors, to destroy Fleas. At the Full Moon gather Flowers and Seeds, dry your Flowers rather in the shade, than in the Sun, which too much exaleth their virtue; but to avoid corruption, let the Suns heat a little visit them.

Beware of violent heat, and sudden cold, which are the great distempers of this Month, and produce pestilential diseases. Forbear superfluous drinking, but eat heartily; use cold herbs and meats, abstain from Physick. Now the Rivers are more wholesome than the Baths. In time of Pestilence keep your Chamber Windows shut till the Sun have force of shining. Perfume your Chamber every morning with Turp upon a Chafing-dish of Coals. Use Cardus Benedictus boiled, and drunk fasting.

Observations on August.

Full Moon the 5 day, at 11 at night.
 Last quarter the 13 day, at 11 at night.
 New Moon the 21 day, at 9 in the morning.
 First quarter the 28 day, at 3 in the morning.

D. ☉ ☽ Now with thankfulness reap your
 desired Harvest: Sow Winter Herbs
 in the New of the Moon. Esteem
 fair weather as precious, and mis-
 pend it not. Gather Garden-seeds
 near the Fall. Use moderate Diet,
 forbear to sleep presently after
 meat. Take heed of sudden cold
 after heat.

Beware of Physick and Blood-
 letting in the Dog-days, if the Air
 be hot; otherwise, if occasion re-
 quire, you may safely make use
 thereof. Now moderate Diet is
 best. Beware of Surfeits, Heats and
 Colds, for Pleurifies are engendred
 thereby. Use not to sleep much, es-
 pecially in the afternoon, for that
 brings oppilations, headach, agues,
 and Catharrs, and all notorious dis-
 tempers of the same kind. Red
 Wine and Claret are excellent Re-
 medies for Children against the
 Worms.

A Description of the Four Quarters of the Year

THe *Spring Quarter* begins this Year upon Thursday the 9th of *March*, at 18 min. past 9 at night, at which time the Sun enters the *Equinoctial Sign* *Aries*, causing an equality of Day and Night all the habitable World over. *Summer* takes beginning this Year upon Saturday, *June* 10. about a quarter of 9 at night, the Sun then approaching towards the *Zenith*, and enters the first *Scruple* of our *Tropical Sign* *Cancer*, making the longest Days with us, and the shortest Nights, though the contrary to our *Antipodes*. *Autumn*, & *Harvest Quarter*, begins when the Sun touches the first *Scruple* of the *Equinoctial Sign* *Libra*, which this year falls upon Tuesday the 12th of *Sept.* 51 min. past 10 in the morning, again equalizing both Day and Night, as, when he enters *Aries*. *Winter* begins this year *Decemb.* 11th, near in the morning, being Munday, the Sun then touching the first *Scruple* of the *Tropical Sign* *Capricorn*, making the shortest Day and longest Night in this year on this side the *Equator*; As also the longest Day and shortest Night to them who inhabit the *Southerly* part of the World.

Of the Eclipses that will happen this Year

Four times this Year will the *Luminaries* be eclipsed, twice the Sun, and as often the Moon, but only two of them visible to us: The first will be of the Moon, *Jan.* 12. the greatest darkness about 30 min. past 3 in the morning, it begins at 58 min. past 3 and ends at 44 min. past 3 in the morning, Digits eclipsed 18 digrs. 45 in. This may be seen in our Hemisphere: As also the second Eclipse of the Moon, which falls *June* the 23d, the greatest darkness near 20 min. after Noon, Digits Eclipsed near 21, yet not Central; this may be seen if the Air be clear, but those two following are invisible to us. The third is of the Moon, *July* 7, about 10 in the morning. And the fourth of the Sun, *Decemb.* 16. about midnight, and therefore both invisible to us, and therefore no more need be said of them.
